

PROJECT PROPOSAL: LITE PDF SHELF

Prepared for: Github & Netlify Reviewers | Author: Lead Architect | Date: May 2026

1. EXECUTIVE SUMMARY:

The Lite PDF Shelf is a ultra-responsive client-side web application designed to store, catalog, and render high-fidelity portable document formats (PDFs) directly in the browser. This system ensures instantaneous document access without heavy server-side processing.

2. PRIMARY OBJECTIVES:

- Provide zero-database offline capabilities using modern web APIs and local storage.
- Craft an immersive, responsive split-pane interface styled with Tailwind CSS.
- Implement secure drag-and-drop file ingestion using standard browser FileReader APIs.

3. TECHNOLOGY STACK:

- Framework: React 19 & Vite 6 with fully static HTML compilation.
- Styling: Tailwind CSS v4 featuring unified utility classes and variables.
- Deployment: Fully optimized for 1-click Netlify and GitHub static hosting.

4. IMPLEMENTATION ROADMAP:

- Phase 1: Interactive library cataloging, search indexes, and active state management.
- Phase 2: Native embedded browser pdf frames & fluid motion layouts.
